

Cablemarkers - CM75 and CM86

Product Description

Produced in two sizes, the dual card (2 x 86mm x 27mm labels) and the quad card (4 x 86mm x 13.5mm labels), these semi-rigid cable markers are easily installed on single or large looms of cables using cable ties. The text is made permanent by a thermal transfer process making for a long lasting identification.

Manufactured from a specially formulated Nylon / ABS compound which makes them flexible and durable at the same time. They come in a range of nine standard colours with either white or black text. Independently tested to ISO 188: 1998 and ISO 4892-2: 1994, equivalent to 5 years exposure in a Northern European climate.

Fineline cablemarkers can be supplied and delivered direct to site pre-printed. Simply send the information to be printed electronically (Word or Excel) to our in house production facility and, dependant on quantity required, delivery should take place within 24-48 hours

AVAILABLE COLOURS

Please note colours are indicative only
Monitors and printers may be calibrated differently
Text colour as shown unless otherwise requested
(Text colours available - White, Black & Red)

Technical Data

DUAL CARD CM86

Suitable for up to 5 Lines of Text

QUAD CARD CM75

Suitable for up to 2 Lines of Text

PRODUCT SPECIFICATIONS

Material: Nylon / ABS compound
Marking: Thermal Transfer

PERFORMANCE

Weathering test: Equivalent to 5 years exposure in a Northern European climate
Long term high temperature +85°C
Short term high temperature +180°C
Long term low temperature -40°C
Long term humidity (4 weeks)

CHEMICAL/SOLVENT RESISTANCE

Samples immersed in 7 specified fluids for 30 minutes at 23°C followed by 10 rub cycles
